## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claims 19-23, drawn to a drug packaging arrangement.

Group II, claims 1-18, drawn to a method of administering multiple individual doses.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:
3. According to PCT Rule 13.2, unity of invention exists only when there is a shared same or corresponding special technical feature among the claimed inventions. Here, the technical feature of Group II is the dose dispensing arrangement, which is not required to practice the method of Group I.
4. Furthermore, the dose dispensing arrangement is not a contribution over the art. ALEXANDER (WO 02/26078; Published Apr. 4, 2002) discloses an oral hygiene system comprising unit doses of multiple flavors of toothpaste in the form of, *inter alia*, beads, tablets, and capsules (i.e. pills) (abstract; page 2, last paragraph). This system is designed, in particular, for increasing children's desire to brush their teeth (i.e. to increase compliance by preventing taste aversion) (abstract; page 5, first paragraph; page 7, first paragraph). Alexander teaches that

the beads may be packaged in standard blister packs (i.e. having a foil backing) and can be available in a random pattern (i.e. as from a mixed bag) (page 16, under element 3). Therefore, the dispensing arrangement is not a special technical feature as defined under PCT Rule 13.2, Part I (b). Thus, the technical feature of Group II is not a contribution over the art and the claims are subject to restriction.

5. The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

6. In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder.** Further, note that the prohibition against double

patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
